ELSEVIER

Comput. Methods Appl. Mech. Engrg. 133 (1996) 375–378

Computer methods in applied mechanics and engineering

Subject Index of Volume 133

Boundary element methods

The *h-p* boundary element method for solving 2- and 3-dimensional problems, E.P. Stephan 183–208

Dynamics

Non-linear dynamics of multibodies with composite laminates, H. Du, M.K. Lim and K.M. Liew 15– 24

Elasticity

Stress-induced phase transformations in elastic solids under anti-plane deformations: dissipative constitutive models and numerical simulation, E.N. Mamiya and J.C. Simo 47– 77

Finite element analysis in professional practice, B.A. Szabo and R.L. Actis 209–228

Finite element and matrix methods

Algorithmic tangent matrix approach for mixed hardening model of endochronic plasticity, S.-Y. Hsu and O. Hayden Griffin, Jr. 1– 14

A retrofit based methodology for the fast generation and optimization of large-scale mesh partitions: beyond the minimum interface size criterion, D. Vanderstraeten, C. Farhat, P.S. Chen, R. Keunings and O. Ozone 25– 45

Stress-induced phase transformations in elastic solids under anti-plane deformations: dissipative constitutive models and numerical simulation, E.N. Mamiya and J.C. Simo 47– 77

Mesh generation and flow calculations in highly contorted geometries, J.C. Heinrich, D.R. Poirier and D.F. Nagelhout 79– 92

Integration methods for complex plastic constitutive equations, J.L. Chaboche and G. Cailletaud 125–155

Scale resolution, locking, and high-order finite element modelling of shells, H. Hakula, Y. Leino and J. Pitkäranta 157–182

Finite element analysis in professional practice, B.A. Szabo and R.L. Actis 209–228

A parallel solver for the *hp*-version of finite element methods, X.Z. Guo and K.W. Myers 229–246

Iterative methods for *p*-version finite elements: preconditioning thin solids, J. Mandel 247–257

hp-Version discontinuous Galerkin methods for hyperbolic conservation laws, K.S. Bey and J.T. Oden 259–286

Application of *hp*-adaptive BE/FE methods to elastic scattering, L. Demkowicz and J.T. Oden 287–317

Approximation properties of the *h-p* version of the finite element method, I. Babuška and B.Q. Guo 319–346

Analytical and computational assessment of locking in the *hp* finite element method, M. Suri 347–371

Fluid mechanics
Mesh generation and flow calculations in highly contorted geometries, J.C. Heinrich, D.R. Poirier and D.F. Nagelhout 79– 92
Zero-relaxation limit versus operator splitting for two-phase fluid flow computations, F. Béreux 93–124

Gas dynamics
Zero-relaxation limit versus operator splitting for two-phase fluid flow computations, F. Béreux 93–124

Kinematics
Non-linear dynamics of multibodies with composite laminates, H. Du, M.K. Lim and K.M. Liew 15– 24

Modern computer architecture
A retrofit based methodology for the fast generation and optimization of large-scale mesh partitions: beyond the minimum interface size criterion, D. Vanderstraeten, C. Farhat, P.S. Chen, R. Keunings and O. Ozone 25– 45
A parallel solver for the *hp*-version of finite element methods, X.Z. Guo and K.W. Myers 229–246

Neural networks
Zero-relaxation limit versus operator splitting for two-phase fluid flow computations, F. Béreux 93–124

Nonlinear mechanics
Algorithmic tangent matrix approach for mixed hardening model of endochronic plasticity, S.-Y. Hsu and O. Hayden Griffin, Jr. 1– 14
Non-linear dynamics of multibodies with composite laminates, H. Du, M.K. Lim and K.M. Liew 15– 24
Stress-induced phase transformations in elastic solids under anti-plane deformations: dissipative constitutive models and numerical simulation, E.N. Mamiya and J.C. Simo 47– 77
Mesh generation and flow calculations in highly contorted geometries, J.C. Heinrich, D.R. Poirier and D.F. Nagelhout 79– 92
Integration methods for complex plastic constitutive equations, J.L. Chaboche and G. Cailletaud 125–155

Numerical solution procedures
Algorithmic tangent matrix approach for mixed hardening model of endochronic plasticity, S.-Y. Hsu and O. Hayden Griffin, Jr. 1– 14
A retrofit based methodology for the fast generation and optimization of large-scale mesh partitions: beyond the minimum interface size criterion, D. Vanderstraeten, C. Farhat, P.S. Chen, R. Keunings and O. Ozone 25– 45
Mesh generation and flow calculations in highly contorted geometries, J.C. Heinrich, D.R. Poirier and D.F. Nagelhout 79– 92
Scale resolution, locking, and high-order finite element modelling of shells, H. Hakula, Y. Leino and J. Pitkäranta 157–182

The *h-p* boundary element method for solving 2- and 3-dimensional problems, E.P. Stephan 183–208
Finite element analysis in professional practice, B.A. Szabo and R.L. Actis 209–228
A parallel solver for the *hp*-version of finite element methods, X.Z. Guo and K.W. Myers 229–246
Application of *hp*-adaptive BE/FE methods to elastic scattering, L. Demkowicz and J.T. Oden 287–317
Approximation properties of the *h-p* version of the finite element method, I. Babuška and B.Q. Guo 319–346
Analytical and computational assessment of locking in the *hp* finite element method, M. Suri 347–371

Phase changes
Stress-induced phase transformations in elastic solids under anti-plane deformations: dissipative constitutive models and numerical simulation, E.N. Mamiya and J.C. Simo 47– 77

Plasticity
Algorithmic tangent matrix approach for mixed hardening model of endochronic plasticity, S.-Y. Hsu and O. Hayden Griffin, Jr. 1– 14
Integration methods for complex plastic constitutive equations, J.L. Chaboche and G. Cailletaud 125–155

Shells and plates
Scale resolution, locking, and high-order finite element modelling of shells, H. Hakula, Y. Leino and J. Pitkäranta 157–182
Iterative methods for *p*-version finite elements: preconditioning thin solids, J. Mandel 247–257
Analytical and computational assessment of locking in the *hp* finite element method, M. Suri 347–371

Solution of differential equations
Non-linear dynamics of multibodies with composite laminates, H. Du, M.K. Lim and K.M. Liew 15– 24

Solutions of ordinary and partial differential equations
Integration methods for complex plastic constitutive equations, J.L. Chaboche and G. Cailletaud 125–155
The *h-p* boundary element method for solving 2- and 3-dimensional problems, E.P. Stephan 183–208
Approximation properties of the *h-p* version of the finite element method, I. Babuška and B.Q. Guo 319–346

Structural mechanics
Non-linear dynamics of multibodies with composite laminates, H. Du, M.K. Lim and K.M. Liew 15– 24
Iterative methods for *p*-version finite elements: preconditioning thin solids, J. Mandel 247–257

Supersonic flow
hp-Version discontinuous Galerkin methods for hyperbolic conservation laws, K.S. Bey and J.T. Oden 259–286

Systems of linear and nonlinear simultaneous equations
Iterative methods for *p*-version finite elements: preconditioning thin solids, J. Mandel 247–257

Viscoelastic and viscoplastic media
Integration methods for complex plastic constitutive equations, J.L. Chaboche and G. Cailletaud 125–155

Viscous flow
Mesh generation and flow calculations in highly contorted geometries, J.C. Heinrich, D.R. Poirier and D.F. Nagelhout 79– 92

Wave motion
hp-Version discontinuous Galerkin methods for hyperbolic conservation laws, K.S. Bey and J.T. Oden 259–286
Application of *hp*-adaptive BE/FE methods to elastic scattering, L. Demkowicz and J.T. Oden 287–317
